# TableTop Exercise

**Experience and validate the effectiveness of your action plan during a crisis scenario**

Cyber-attacks can have a major impact on all business activities. Our incident simulation prepares organizations for this reality, enabling them to optimize the strategy that protects their assets and operations, as well as their customer and partner relationships.

# The organizational resilience: prevention, proactivity, and response

---

Our solution is designed to validate and optimize your Incident Response Plan (IRP). Through a role-playing exercise led by our experts, participants assess their safety posture, define their roles, and determine which tactics to adopt.

The experiment concludes with a report containing precise recommendations on which protocol to follow.

We are here to support you in analyzing your needs and offering the most suitable solutions for your situation.

---

---

---

Demonstrate your sense of responsibility by understanding the risks, determining which actions are to be taken and preparing your organization to manage a major incident.
